

Plug In More, Protect More with Back-UPS® Solutions

Get the availability you
need with more outlets
and functionality

Back-UPS® ES

The best value for home computers just got even better with three models offering new features like an LED replace battery indicator so you can see the status of your unit at a glance. In addition, all three have a new look, a new easy-to-open battery door (no screwdriver required), an increased warranty (three years) and an increased Equipment Protection Policy (\$75,000). But the best news is more outlets.

More options for increased runtime and proven protection of all your critical devices.

The Back-UPS® ES 350 (BE350R) and the Back-UPS ES 500 (BE500R) have two new outlets, for a total of four battery backup with surge protection and four surge protection only, so you can plug in more critical devices. The 350VA offers up to 27 minutes of runtime and 200 watts, while the 500VA offers up to 44 minutes and 300 watts. Both have built-in telephone line surge protection.

The Back-UPS ES 650 (BE650R) offers up to 62 minutes of runtime with eight outlets, and adds data line surge protection for your cable modem and network Ethernet connection. Its 650VA and 390 watts offer plenty of power for your home system.

All three are available in prices from \$39.99 to \$79.99.

Back-UPS® RS

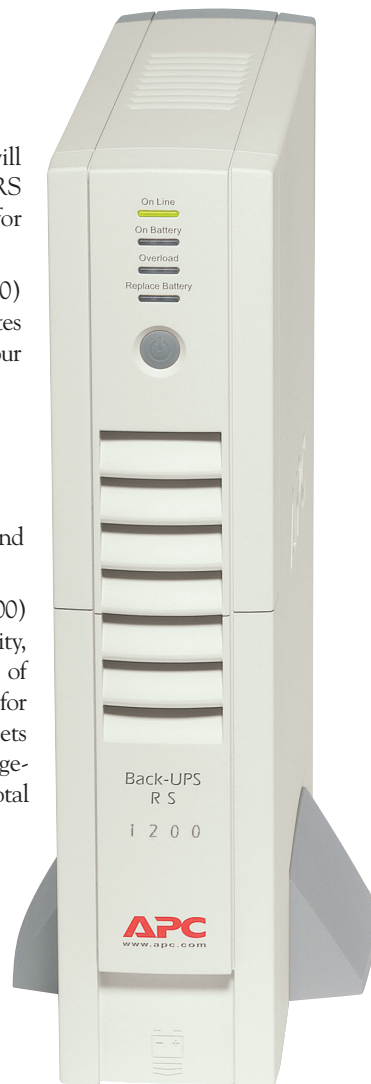

Those who work from home will appreciate the upgrade to our RS high-performance Back-UPS for more power than the ES.

The Back-UPS RS900 (BR900) offers 540 watts and up to 85 minutes of runtime with seven outlets (four

battery backup, three surge-only) and protection for all your data lines.

The Back-UPS RS1200 (BR1200) offers 1200VA power output capacity, 780 watts and up to 99 minutes of runtime with built-in protection for all your data lines. Its eight outlets (six battery backup, two surge-only) leave plenty of room for total connectivity.

Look for the BR900 and 1200 at \$149.99 and \$199.99 respectively, with a \$150,000 Equipment Protection Policy.
